Opportunities at National Labs

The Department of Energy (DOE) National Labs execute long-term government scientific and technological missions and develop unique, often multi-disciplinary, scientific capabilities, which benefit the nation’s researchers and national strategic priorities. There are 17 National Labs within the DOE employing thousands of scientists and offering a variety of internships for undergraduate and graduate students in the sciences.

The National Laboratories Office (NLO) of the TAMU System, instituted in 2018, plays a role in management of Los Alamos National Laboratory and serves as a primary point of engagement with all DOE and National Nuclear Security Agency (NNSA) Laboratories.

See all opportunities for students HERE. For more information, contact lanl-engage@nlo.tamus.edu.
